

### **categorification in geometry topology pdf**

Categorification is a powerful tool for relating various branches of mathematics and exploiting the commonalities between fields. It provides a language emphasizing essential features and allowing precise relationships between vastly different fields. This volume focuses on the role categorification plays in geometry, topology, and physics.

Anna Beliakova, Aaron D. Lauda, "Categorification in Geometry, Topology, and Physics" 2017 | ISBN-10: 1470428210 | 268 pages | PDF | 2 MB

### **Categorification in Geometry, Topology, and - avxhm.is**

Categorification is a powerful tool for relating various branches of mathematics and exploiting the commonalities between fields. It provides a language emphasizing essential features and allowing precise relationships between vastly different fields. This volume focuses on the role categorification plays in geometry, topology, and physics.

### **Categorification in Geometry, Topology, and Physics**

Geometry, Topology and Physics, Second Edition is an ideal introduction to differential geometry and topology for postgraduate students and researchers in theoretical and mathematical physics.

Ben Webster (Northeastern/Oregon) Categorification, Lie algebras and Topology June 17, 2011 8 / 26 The monoidal structure The category  $\mathcal{U}$  is monoidal; it has a tensor product.

### **Categorification, Lie algebras and Topology**

Abstract: We construct a categorification of the quantum  $sl_3$  projectors, the  $sl_3$  analog of the Jones-Wenzl projectors, as the stable limit of the complexes assigned to  $k$ -twist torus braids (as  $k$  goes to infinity) in a suitably shifted version of Morrison and Nieh's geometric formulation of  $sl_3$  link homology (math.GT/0612754). We use these projectors to give a categorification of the  $sl_3$  ...

## **[1109.1745] A Categorification of Quantum $sl_3$ Projectors**

This is a collection of topology notes compiled by Math 490 topology students at the University of Michigan in the Winter 2007 semester. Introductory topics of point-set and algebraic topology are covered in a series of five chapters. Foreword (for the random person stumbling upon this document)

## **Renzo's Math 490 Introduction to Topology**

But topology has close connections with many other fields, including analysis (analytical constructions such as differential forms play a crucial role in topology), differential geometry and partial differential equations (through the modern subject of gauge theory), algebraic geometry (the topology of algebraic varieties), combinatorics (knot theory), and theoretical physics (general relativity and the shape of the universe, string theory).

## **Categorification in geometry, topology, and physics**

We present complete calculations of the homotopy theoretic obstruction in certain concrete examples. We also discuss several applications to symplectic and contact topology, including to Nadler's program for the arborealization of singularities of Lagrangian skeleta. The relevant papers are arXiv:1605.07259 and arXiv:1605.07258. Our e-mail list.

The reverse of categorification is the process of decategorification. Decategorification is a systematic process by which isomorphic objects in a category are identified as equal. Whereas decategorification is a straightforward process, categorification is usually much less straightforward, and requires insight into individual situations.
