Comparative methods: An overview – The development and implementation of comparative phylogenetic methods provided a better understanding of biological evolution (adapted from Garland et al. 2005. JEB 208, 3015-3035). Some key conceptual advances are: (1) The results of comparative analyses does not necessarily mean evidence of adaptation.

Phylogenetic comparative methods (PCMs) use information on the historical relationships of lineages (phylogenies) to test evolutionary hypotheses. The comparative method has a long history in evolutionary biology; indeed, Charles Darwin used differences and similarities between species as a major source of evidence in *The Origin of Species*.

modern linguistics, cognitive neuroscience and neo-Darwinian evolutionary theory has begun to make important contributions to our understanding of the biology and evolution of language. I review some of this recent progress, focusing on the value of the comparative method, which uses data from animal species to draw inferences about language evolution.

aspects of evolutionary biology have proved more difficult and one of these areas is finding evidence for natural selection by comparative analysis. This is an old problem in evolutionary biology.

The comparative method in evolutionary biology - Springer

In a rather fragmented fashion, the book revolves around the conceptual foundations of the comparative method, the development of formal analytical methods, and the implementation of these methods. In this context, chapters 1 and 13 by Emmanuel Paradis and an excellent chapter 5 by Matthew Symonds and Simon Blomberg provide a good introduction to phylogenetic statistical tools.

Phylogenetic comparative approaches are powerful analytical tools for making evolutionary inferences from interspecific data and phylogenies. The phylogenetic toolkit available to evolutionary biologists is currently growing at an incredible speed, but most methodological papers are published in the specialized statistical literature and many are incomprehensible for the user community.
