Computational methods in Structural Mechanics & Applications

Mechanics: Computations & Composites The theory of homogenization is well established for linear, periodic, deterministic models. For moderate nonlinearities sound and effective computational procedures have been developed. However, bottlenecks still arise in how to incorporate results from nonlinear fine scale models into coarse-grained models.

The linear thermoelastic and thermophysical behavior of a short fiber reinforced composite material with planar random fiber arrangement is investigated by advanced numerical and analytical micromechanical methods. On the one hand, finite element based multi-fiber unit cells are introduced that contain 40-50 short fibers in arrangements approximating 2D random orientation distributions.
