Soldier Pile and Lagging Design Requirements

Sheet pile walls are constructed by driving sheet pile sections into the ground. Sheet piles, depending on soil conditions might be vibrated into the ground instead of being hammer driven. Sheet pile design has to consider moments and design life.

A pile cap is a thick concrete mat that rests on concrete or timber piles that have been driven into soft or unstable ground to provide a suitable stable foundation. It usually forms part of the foundation of a building, typically a multi-story building, structure or support base for heavy equipment. The cast concrete pile cap distributes the load of the building into the piles.

A pile driver is a device used to drive piles (poles) into soil to provide foundation support for buildings or other structures. The term is also used in reference to members of the construction crew that work with pile-driving rigs. One type of pile driver uses a weight placed between guides so that it can slide vertically.
