

semiconductor optoelectronic devices bhattacharya pdf

A heterojunction is the interface that occurs between two layers or regions of dissimilar crystalline semiconductors. These semiconducting materials have unequal band gaps as opposed to a homojunction. It is often advantageous to engineer the electronic energy bands in many solid-state device applications, including semiconductor lasers, solar cells and transistors ("heterotransistors") to name ...

Zinc oxide is an inorganic compound with the formula ZnO. ZnO is a white powder that is insoluble in water, and it is widely used as an additive in numerous materials and products including rubbers, plastics, ceramics, glass, cement, lubricants, paints, ointments, adhesives, sealants, pigments, foods, batteries, ferrites, fire retardants, and first-aid tapes.

Andrey Kistanov, Devesh Kripalani, Yongqing Cai, Sergey Dmitriev, Kun Zhou, Yong-Wei Zhang Layered two-dimensional (2D) materials like graphene are highly appealing for lithium battery applications owing to their high surface-volume ratios. However, a critical issue that limits their practical applications is the...

1. Introduction. The developments in material science are the driving force of technological progress. It is the first time that the concept of nano materials is a German scientist Gleiter (Gleiter et al., 1981). Nanomaterials are, by definition, the natural or artificial materials possess at least one dimension in the size of nanoscale (Felix et al., 2013, Jiang et al., 2013, Nie et al., 2013).
