The principle of inverse time protection is especially suited for radial networks where the variations of short-circuit power due to changes in network configuration are small or where the short-circuit current magnitude at the beginning and end of the feeder differs considerably. In these cases, the use of inverse time relays in favor of definite time relays can usually speed up the operating ...

SKM Systems Analysis, Inc. provides a complete line of electrical engineering software including PowerTools for Windows and Arc Flash Hazard Analysis. Electrical engineers use PowerTools to perform harmonic analysis, transient stability analysis, short circuit analysis, and to determine demand load, voltage drop, arcfash hazard analysis and protective device coordination.

Introduction. To ensure coordination, the brain must make accurate predictions about how to direct movement (Medina, 2011). These predictions are constructed through a process of error-driven learning, and then stored as associative memories in the cerebellum (Albus, 1971, Marr, 1969, Medina, 2011, Raymond et al., 1996). Correlates of such memories have been observed in the firing patterns of ...
