In mathematics, a limit is the value that a function (or sequence) "approaches" as the input (or index) "approaches" some value. Limits are essential to calculus (and mathematical analysis in general) and are used to define continuity, derivatives, and integrals.. The concept of a limit of a sequence is further generalized to the concept of a limit of a topological net, and is closely related ...

In mathematics, a series is the sum of the terms of an infinite sequence of numbers.. Given an infinite sequence  $(a_n)$ , the  $n$ th partial sum is the sum of the first  $n$  terms of the sequence, that is,  $S_n = \sum_{k=1}^n a_k$ . A series is convergent if the sequence of its partial sums  $\{S_n\}$  tends to a limit; that means that the partial sums become closer and closer to a given number when the number of ...

Section 8-7 : Convergence of Fourier Series. Over the last few sections we've spent a fair amount of time to computing Fourier series, but we've avoided discussing the topic of convergence of the series.

### **Differential Equations - Convergence of Fourier Series**

In this section we will discuss in greater detail the convergence and divergence of infinite series. We will illustrate how partial sums are used to determine if an infinite series converges or diverges. We will also give the Divergence Test for series in this section.

On the other hand, a sequence of elements from an metric space may have several - even infinitely many - different limits provided that is equipped with a topology which fails to be  $T_2$ . One reads the expression in (1) as "the limit as approaches infinity of is  $L$ ". The topological notion of convergence can be rewritten to accommodate a wider array of topological spaces by utilizing the language ...

### **Limit -- from Wolfram MathWorld**

The world is experiencing a historically unprecedented transition from predominantly rural to urban living. In 1950, one-third of the world's population lived in cities; today the number has already reached more than one-half, and in 2050 city dwellers are expected to account for more than two-thirds of the world's population (see Figure 2.1).4

One way of interpreting the convergence of a sequence  $\{X_n\}$  to  $X$  is to say that the "distance" between  $X$  and  $X_n$  is getting smaller and smaller.
