The trauma model of mental disorders, or trauma model of psychopathology, emphasises the effects of physical, sexual and psychological trauma as key causal factors in the development of psychiatric disorders, including depression and anxiety as well as psychoses, whether the trauma is experienced in childhood or adulthood. It conceptualises victims as having understandable reactions to ...

Trauma model of mental disorders - Wikipedia

Memory is described by psychology as the ability of an organism to store, retain, and subsequently retrieve information. When an individual experiences a traumatic event, whether physical or psychological, their memory can be affected in many ways. For example, trauma might affect their memory for that event, memory of previous or subsequent events, or thoughts in general.

The Science Three-Level Hypothesized Explanation of the IM effect (McGrew, 2012). Interactive Metronome (IM) is believed to improve the resolution and efficiency of an individual's internal brain clock(s) and temporal processing. In turn, it is hypothesized that this results in more efficient brain connectivity, communication, and synchronization via increased integrity of the brain's white ...
